

# COMPROMISE & TRANSITION RAILS

Atlantic Track produces flash-butt welded compromise rails and tapered transition rails.

Compromise rails are manufactured by forging together two different rail sections.

Transition rails are fabricated from one parent rail section, machine down to desired head wear for gradual and safe connection.

Both rails are available in a multitude of rail types, new-new or new-worn.

## Key Product Benefits:

- Alternative to mechanical joints and typically found in CWR installations, these rails eliminate bolt hole defects and related maintenance.
- Any section, length or wear is available to ensure a smooth transition between obsolete or worn sections.
